

### Blue-ringed octopus

Although it's relatively small -- only the size of a golf ball --

One bite can kill up to 26 men, and there

### Irukandji jellyfish

This tiny jellyfish, which may only grow as big as a person's fingertip, packs a huge punch. Unfortunate victims contract Irukandji syndrome, excruciating pain that even morphine has little effect on. Even worse, there is no anti-venom for the sting.

### Cone snail

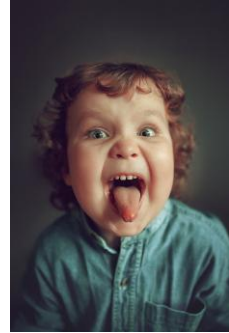

They have hollow modified teeth called "radulae" that are sharp enough to penetrate a wetsuit, and the estimated human lethal dose is incredibly small -- it's believed that the venom in one of these mollusks is enough to kill 20 adult humans.

### Funnel-web spider

The potent venom of this spider is reputedly twice as deadly as cyanide. The effects on a human include increased blood pressure, arrhythmia, coma and death. The venom acts swiftly and can kill a small child within 15 minutes.

# James 3:3-8

The words you say to somebody can give somebody life.

When was there a time when someone said something nice to you that made you feel good, or encouraged you?

Which two people can you encourage this week with your words?
